Strings

DESCRIPTION

This section will guide you to:

- Create a Java project in your IDE
- Write a Java program to create strings and convert them into StringBuffer and StringBuilder

```java
package stringbuffer;

public class stringBuffer
{

    public static void main(String[] args)
    {
        // TODO Auto-generated method stub
        System.out.println("String to StringBuffer");
        String str = "Hello";
        StringBuffer sb = new StringBuffer(str);
        sb.append(" Nice to meet you ");
        System.out.println(sb);

        System.out.println("String to StringBuilder");
        StringBuilder s = new StringBuilder("Welcome");
        s.append(" to Java");
        System.out.println(s);

    }

}
```

OUTPUT

```
String to StringBuffer
Hello Nice to meet you
String to StringBuilder
Welcome to Java
```
